

# Zero Trust Assessment

## Modern solutions for business security

### Business challenge

Traditional IT security is increasingly weakened by rapidly advancing technology and a growing threat of breaches. Organisations need comprehensive, sustainable protection, but existing systems with perimeter-based security are no longer reliable.

Zero Trust is a modern security strategy based on the following principle: Never trust, always verify. This method limits access to only those who absolutely require it to perform their jobs. With a Zero Trust architecture, businesses can protect their assets for the long run, strengthening overall cybersecurity.

### How we help

Our team starts with interactive stakeholder meetings addressing the five pillars of Zero Trust. Next, our security engineers conduct an evaluation report identifying areas of improvement. Then we have a review session where we provide recommendations for actions and identified next steps.

With Insight's Zero Trust Assessment, we can help you:

- Gain a comprehensive understanding of your business environment with a report on the current state versus desired state.
- Acquire training on Zero Trust adoption benefits and apply the National Institute of Standards and Technology (NIST) Framework for a Zero Trust security approach.
- Identify gaps and areas for improvement based on the Zero Trust architecture.
- Review recommendations to improve Zero Trust maturity level with identified next steps.

### Duration

- 2 weeks

### Benefits

- Reduce security threat exposure
- Improve threat visibility and response
- Facilitate governance and compliance

### Get started.
